

Meso-zooplankton abundance:

8830 ind. m⁻³

**Long-term average (June,
1984-2015):** 2007 ± 962 ind.m⁻³

Most abundant taxa :

- Cladocerans: *Pseudevadne tergestina* (45%),
Penilia avirostris (40 %)
- Copepod: *Centropages typicus* (3%)

Dry mass: 23.9 mg m⁻³

Long-term average (June, 1984-2015):
10.3 ± 4 mg m⁻³

Note: Sample collected with WP2 net

Rare species of copepod *Sapphirina ovatolanceolata*, male
