

Meso-zooplankton abundance:

3545 ind. m⁻³

Long-term average (July,

1984-2015): 3113 ± 1475 ind.m⁻³

Most abundant taxa :

- Cladocerans: *Penilia avirostris* (30 %),
- Tunicates: *Doliolum nationalis* (16 %),
- Copepod: *Temora stylifera* (6%)

Dry mass: 15.9 mg m⁻³

Long-term average (June, 1984-2015):

12.6 ± 4.5 mg m⁻³

Note: Sample collected with WP2 net
