

### Phytoplankton abundance:

$4.0 \times 10^2$  cells ml<sup>-1</sup>

### Phytoplankton groups percentage:

flagellates: 84.7%, coccolithophores: 6.6%,  
dinoflagellates: 5.6%, diatoms: 3.1%

### Most abundant taxa:

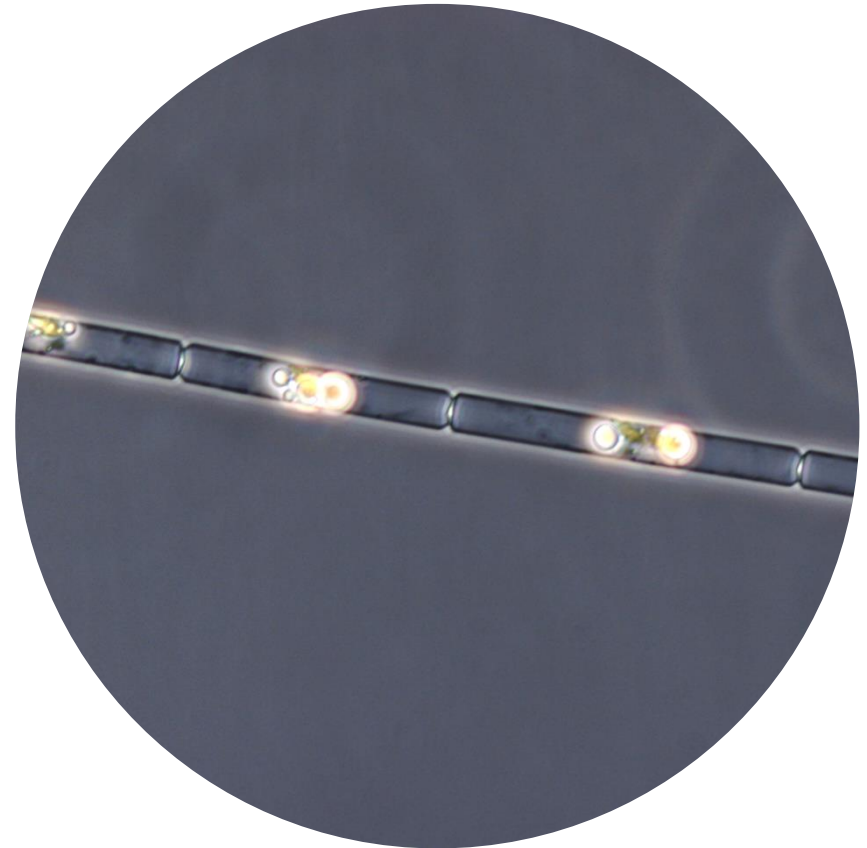

*Emiliana huxleyi* (4.7%)

Naked dinoflagellates < 15 μm (2.4%)

### Most abundant species in the net sample:

No dominant species in the net

### NOTES:

**Live sample**

*Main species in the picture: Leptocylindrus convexus*
